

MILLIKEN & COMPANY *manufactures essential materials*

CHEMICAL DIVISION

Milliken & Company is heavily involved in the essential chemical manufacturing industry. From medical devices, pharmaceuticals, and lab equipment to sanitization and food storage, Milliken's Chemical Division is a crucial component manufacturer and a provider of critical products needed to keep us safe. Our plastic coatings and additives are key ingredients in laundry care packaging, lids for sanitizing wipes and gels, household and industrial cleaners, disinfectants, food packaging (canned goods, for example), agriculture, personal care, fuel additives, and water treatment. We produce precursors for the semiconductor chip manufacturing to supply the U.S. military, communications, pharma, and other data-centered supply chains. In addition, we are a critical supplier to other large manufacturers such as Dow, Momentive, and SC Johnson.

HEALTHCARE DIVISION

Milliken's Healthcare Division is focused on improving patients' lives. From wound care dressings and compression wraps to medical tapes and cohesive bandages, we provide essential medical equipment that protects patients and supports medical professionals. Our medical products are used in hospital emergency rooms and operating rooms, doctors' offices, and wound clinics.

TEXTILE DIVISION

The protective textile manufacturing industry is essential in this critical time. **Our protective fabrics are everywhere.** Milliken's protective textile products are worn across the United States by many critical infrastructure workers, including first responders, hospital and lab personnel, military personnel and war fighters, and workers in oil and gas, utilities, and transportation. These uses are mainly in uniform apparel, many of which are highly technical fabrics that provide protection to the wearer (Flame Resistant, Oil Repellent, Chemical Splash Resistant, Concealment, and High Visibility). Additionally, we produce fabrics that are substrates for duct tape, home shingles, commercial roofing, and telecommunication infrastructure uses, including on U.S. military bases.

FLOORING DIVISION

Milliken's Flooring Division provides safe flooring easily changed in urgent situations. 95 percent of our floor covering products are modular, portable, and interchangeable. If rapid change-outs are required in contaminated buildings, the process is efficient and effective with our product. In the event that urgent medical expansion is needed, modular flooring goes hand-in-hand with this mobilization and enables rapid deployment.

Based on DHS guidance on Essential Critical Infrastructure Workforce, Milliken is directly or indirectly involved in the following categories:

Healthcare and Public Health
Energy
Public Works
Critical Manufacturing
Chemical
Defense

Law Enforcement, Public Safety, First Responders
Food and Agriculture
Transportation and Logistics
Communications and Information Technology
Other Community-Based Government Operations and Essential Functions

Milliken

MILLIKEN & COMPANY *manufactures essential materials*

Based on DHS guidance on Essential Critical Infrastructure Workforce, Milliken is directly or indirectly involved in the following categories:

HEALTHCARE AND PUBLIC HEALTH

- Testing and research critical to COVID-19 response
- Hospital, laboratory, home health, medical facilities, blood and plasma operations
- Medical equipment, PPE, and sanitization manufacturing
- Security, incident management, and emergency operations

LAW ENFORCEMENT, PUBLIC SAFETY, FIRST RESPONDERS

- Emergency management, law enforcement, Emergency Management Systems, fire, and corrections, including front line and management and Emergency Medical Technicians
- Hazardous material responders
- Digital systems infrastructure support

FOOD AND AGRICULTURE

- Manufacturing and distribution of food, beverage, feed, forest products, chemicals, medicines, vaccines, and other substances used by the food and agriculture industry
- Manufacturing and maintenance of equipment and other infrastructure

ENERGY

- Power generation, transmission, and distribution
- Nuclear generation safety and security
- Vegetation management and traffic
- Environmental remediation and monitoring
- Instrumentation, protection, and control
- Petroleum product storage, pipeline, marine transport, terminals, rail transport, and road transport
- Crude oil storage facilities, pipeline, and marine transport
- Petroleum drilling, extraction, production, processing, refining, terminal operations, transportation, retail, and refinery operations and emergency response
- Natural gas production, transmission, processing, distribution, storage, refining, and transporting (including end-use fuels or feedstocks)

PUBLIC WORKS

- Operation, inspection, and maintenance of essential dams, locks, levees, and other public works facilities
- Safety, sanitation, and essential operations of residences
- Support, such as road and line clearing, to ensure the availability of needed facilities, transportation, energy and communications

TRANSPORTATION AND LOGISTICS

- Transportation functions and logistics operations
- Mass transit
- Maritime transport
- Automotive repair and maintenance
- Manufacturing and distribution of packaging materials
- Postal and shipping
- Vehicle repair and maintenance
- Air and cargo by air transportation

COMMUNICATIONS AND INFORMATION TECHNOLOGY

- Construction, maintenance, and restoration of communications infrastructure
- Technology installation, maintenance, and repair

OTHER COMMUNITY-BASED GOVERNMENT OPERATIONS AND ESSENTIAL FUNCTIONS

- Building functions continuity
- Security
- Mission Essential Functions and communications networks
- COVID-19 mitigation and containment measures

CRITICAL MANUFACTURING

- Manufacturing for medical supply chains, transportation, energy, communications, food and agriculture, chemical manufacturing, nuclear facilities, the operation of dams, water and wastewater treatment, emergency services, and the defense industrial base

CHEMICAL

- Chemical and industrial gas supply chains and transportation
- Operation and maintenance of facilities

DEFENSE

- National security commitments to the federal government and U.S. Military
- Materials and services under contract with the Department of Defense
